## Aluminium Extrusion Line Furnaces

Sistem Teknik offers Aluminium Aging Ovens, Die Heating Ovens & Billet Heating Furnace together with Log Hot Shear.

Our furnaces know how to heat up aluminium with minimum energy consumption, at narrow temperature tolerances.

Choice is yours, We can offer unmanned operation systems or conventional lines for extrusion lines.

Our Rapid Billet Heaters are most efficient furnaces in the market with low flue gas temperature, low gas consumption. We are using gas energy up to the end, down to condensation temperature.

Reversible end flow or for long profiles cross flow ageing ovens has outputs with very narrow hardness tolerances.
